1927 Green Plant List

OF

Jersey Grown Dahlias

Issued by Salem Dahlia Gardens

Why Our Plants are Better

Our plants are propagated from especially selected tubers, free from stunt or disease. They are grown under moderate heat and are strong and stocky and thoroughly hardened off before shipment. We have shipped green plants as far as California and they have arrived in fine condition.

Green plants are much less liable to become diseased than tubers. It is seldom necessary to thin out the stalks when green plants are used, and they will as a rule produce better and larger flowers, as well as better tubers.

Green plants should be planted about five to six inches deep. The roots should be unwound and spread in all directions and the plant should then be watered and shaded for a few days.

EVERY PLANT FULLY GUARANTEED

All plants sent out are plainly labelled. We guarantee them to be true to name and to reach you in a good, growing condition.

It is advisable to order at once as stock of some varieties is limited.
